

JULY 2020

DYSGUARD-S:

Protects your pigs against ILEITIS and other enteric diseases... The Natural Way

Pig enteric diseases are significant economic factors in pig production management due to the negative impact on performance and the increased costs of treatment and preventative measures. Two of the most commonly present enteric diseases worldwide are **ILEITIS**, caused by **Lawsonia intracellularis** and swine dysentery (SD), caused by **Brachyspira hyodysenteriae**.

It is estimated with serology testing that 48-100% of worldwide pig farms are infected by **ILEITIS**. Public pressure to decrease the use of antibiotics in controlling **ILEITIS** due to antibiotic resistance has led to the global demand to find suitable Natural Growth Promoters (NGP) as natural replacement.

Maintaining a healthy pig gut is imperative in ensuring optimum performance. The gut is the largest organ of the immune system, whose function is influenced by multiple factors, such as: probiotic and pathogen microbiome interactions, quality of the nutrition, efficacy of digestion and absorption, and production management-animal welfare.

DYSGUARD-S®

Dysguard-S is an innovative concept of improving pig performance by promoting stable gut health with a science-based approach of using nature's solutions.

The product is composed of a carefully balanced mix of essential oils (dominantly *Thymus vulgaris*, *Origanum vulgare*, *Coriandrum* sp.), extract of *Castanea sativa*, encapsulated lysozyme and nicotinamide. It is indicated against **ILEITIS**, caused by *Lawsonia intracellularis* and swine dysentery (SD), caused by *Brachyspira hyodysenteriae*.

DOSAGE AND PROGRAM:

- Prevention : 1 kg / ton feed for 7-10 days
- Treatment : 2 kg / ton feed for 7-10 days
- To be given in the pre-starter, starter, grower and finisher rations

AgriPro Premier Nutrition, Inc. is committed and at the forefront of providing services and salient information to the animal industry as we are one of the leading exclusive distributors in the Philippines for specialty feed ingredients/feed additives, nutraceuticals, medicated feed premixes/pharmaceuticals; serving the livestock, poultry, aqua and companion animal sectors.

WORKING TOGETHER. WINNING TOGETHER.
